Let's Start!

Learning How to Enrich an HTML Document

Learning Outcome:

Understand information about common solutions to problems in spoken or written documents.

Describe concepts, principles, and important characteristics of hypertext preprocessor in spoken or written documents.

Can Do Statements:

- I can explain what an element is in HTML.
- I can talk about nested elements.
- I can give detailed information related to the attributes in HTML.

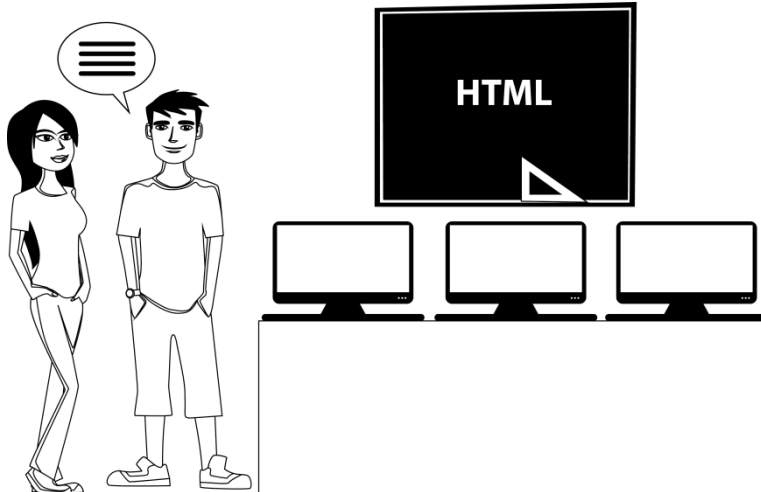

Ask your partner:

- How do you think information, such as, language, size of an image or source of a link, in an HTML document can be specified?
- Why do you think we use opening and closing tags when writing an HTML document?

Let's Explore!

Annie needs help. She's very confused about what HTML elements are!

Instructions: Read the text below.

Annie: I'll be practicing HTML tonight, but I missed the last class. Did you talk about HTML elements?

Matt: Yes. To help you catch up, an HTML element is basically what goes from the beginning of an opening tag to the end of the closing tag, including the content that's written in between.

Annie: Our teacher didn't tell us what the difference between tags, elements, and content was and that's why I was mixing them up when practicing. I'm currently following a complementary course online and they talked about nested elements. Did you address this last class?

Matt: No, she didn't tell us that all HTML documents consisted of nested HTML elements. Nevertheless, we learned this when doing our homework. So, when you practice tonight, you're going to be writing elements inside other elements. This means that you'll be entering a new tag and closing it before a previous one has been closed. For example, you'll insert tags for headings and paragraphs inside the '`< html >`' and '`< / html >`'. Don't forget to always include the closing tags, otherwise, the browser may not be able to properly read the document.

Annie: That's what I learned in the virtual course. However, they didn't say that we could add attributes to tags, and I don't think I'm fully aware of what they are.

Matt: Alright, you'll be using attributes when you want to add extra information to an element. For instance, when inserting the '`< html >`' tag, you can add a language attribute for specifying the language the document is written in. Furthermore, when inserting a link, you will be entering the source of the link after the '`href`' attribute. And the same goes for images, where attributes like '`src`' or '`width`' provide additional information on the source and size of that image.

Let's Practice!

Let's define an element in HTML!

Instructions: Read the sentences. Write the missing words in the blanks. Use: were supposed, be preceded, are known, was something, was defined.

1. Annie didn't say that an element in HTML _____ by a starting tag.
2. The teacher didn't tell us that in order to close a tag, its name should _____ by a forward slash.
3. She didn't say to me that an element _____ that goes from the beginning to the end of a tag.
4. The engineer didn't tell us that not all elements _____ to be closed in HTML
5. HTML elements that don't need to be closed like `<img../>`, `<hr/>` or `<br/>` _____ as void elements.

Let's Practice!

How much do you know about attributes in HTML?

Instructions: Select the correct answer to complete the sentences.

1. Do not forget that attributes in HTML _____ additional information about an element.
 - a. provide
 - b. provides
 - c. providing
2. The engineer _____ the 'html' tag and then he added a language attribute.
 - a. insert
 - b. inserted
 - c. inserts
3. You'll _____ attributes if you want to add extra information and define the characteristics of an element.
 - a. used
 - b. using
 - c. use
4. Attributes like 'src' or 'width' _____ additional information regarding the source and size of the image.
 - a. defining
 - b. defines
 - c. define
5. When inserting a link, you will be _____ the source of the link after the 'href' attribute.
 - a. entering
 - b. enter
 - c. entered

Extension Activity

Let's learn a little bit more of HTML!

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for more information about elements and attributes in HTML.
- Make a list of the most important aspects about elements and attributes in HTML.
- Number the most used HTML attributes.
- Write a summary with all the information you found.
- Read the summary to your class and have a little discussion about it.

Self-Assessment

Yes

No

- I research about elements and attributes in HTML.
- I summarize important information of a particular topic.
- I write a text about elements and attributes in HTML.
- I talk about important aspects of HTML.

☐ ☐
☐ ☐
☐ ☐
☐ ☐

Target Words

- **complementary course** (adjective): a non-mandatory course in a curriculum that teaches a related subject.
e.g. I'm currently following a complementary course online and they talked about nested elements.
- **address** (verb): to discuss or talk about something.
e.g. Did you address this last class?
- **otherwise** (conjunction): if not, on the contrary.
e.g. Don't forget to always include the closing tags, otherwise, the browser may not be able to properly read the document.
- **furthermore** (adverb): in addition, moreover.
e.g. Furthermore, when inserting a link, you will be entering the source of the link after the 'href' attribute.
- **mix up** (phrasal verb): to confuse something with something else.
e.g. Our teacher didn't tell us what the difference between tags, elements, and content was and that's why I was mixing them up when practicing.
- **nested** (adjective): something that is placed inside something else.
e.g. No, she didn't tell us that all HTML documents consisted of nested HTML elements.

Learning Points

Future Continuous in Affirmative

We use the **future continuous** to talk about actions that will be in the processes of occurring in the future.

We can use the **future continuous** in different situations:

When projecting ourselves into the future.

Example: *Tonight, we **will be practicing** how to write an HTML document.*

When predicting something that can happen in the future.

Example: *Next month, we **are going to be presenting** our webpage to the rest of the class.*

When talking about continuous events that will take place in the future.

Example: *When we write the final HTML document, we **will be inserting** all the necessary attributes.*

Don't forget that we can use both the modal verb **will** and **be going to** for the future continuous as shown in the previous examples.

Examples

- *I'll be practicing HTML tonight, but I missed the last class.*
- *So, when you practice tonight, you're going to be writing elements inside other elements.*
- *This means that you'll be entering a new tag and closing it before a previous one has been closed.*
- *Alright, you'll be using attributes when you want to add extra information to an element.*

Learning Points

Reported Speech in Negative

We can use the **reported speech** when we want to inform what someone said or did not say.

Just as we can use the **reported speech** to inform what someone said, we can also use it to express what someone **did not say**.

The same rules apply for both the affirmative and **negative reported speech**: The *verb tense* of the **reported sentence** depends on the tense that introduces the reported sentence.

We generally use the relative pronoun *that* to introduce the **reported sentence**. We do not use quotation marks.

The only difference between the affirmative form and the **negative form** is that we use the **negative form** of the verb that introduces the **reported statement**.

Example: *The teacher **did not say that** we had to finish the document by tomorrow.*

Don't forget the *shift tense* that needs to be taken into account when reporting from **direct** to **reported speech**:

DIRECT SPEECH	REPORTED SPEECH
Simple present	Simple present (facts)
Simple present	Simple past
Present continuous	Past continuous
Simple Past	Past Perfect
Past Continuous	Past Perfect Continuous
Present Perfect	Past perfect
Past Perfect	Past Perfect

Examples

- *Our teacher didn't tell us what the difference between tags, elements, and content was and that's why I was mixing them up when practicing.*
- *No, she didn't tell us that all HTML documents consisted of nested HTML elements.*
- *However, they didn't say that we could add attributes to tags, and I'm not aware of what they are yet.*
