Let's Start!

What are the HTML basics?

Learning Outcome:

Understand information about common solutions to problems in spoken or written documents.

Describe concepts, principles, and important characteristics of hypertext preprocessor in spoken or written documents.

Can Do Statements:

- I can talk about the basics on HTML.
- I can explain what editors are on HTML.
- I can give examples about editors in HTML.

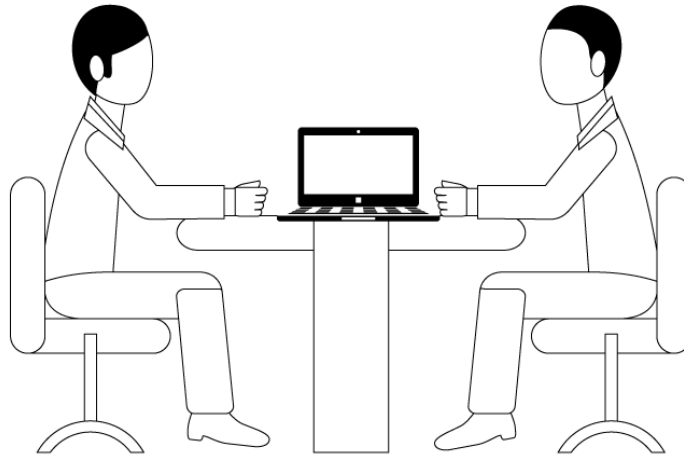

Ask your partner:

- What are the advantages of using professional HTML editors?
- Do you know any professional HTML editor? What are its advantages?

Let's Explore!

Understanding the Very Basis of HTML Documents

Instructions: Read the text below.

Robert: Since we talked about HTML last time, I've been getting more interested in how it works and how it is used. As far as I'm concerned, websites are built by using some pre-determined basic tags, aren't they?

Albert: Exactly. Yesterday I spoke with one of my mentors and he explained to me the basic elements needed for the HTML documents. He told me that all documents must start with the document type declaration `< !DOCTYPE html >`. Then, the text is organized and the appropriate tags are entered depending on how we want the webpage to look like.

My mentor also told me that the document itself begins with the opening tag `< html >` and ends with the closing tag `< / html >`, and that the body of the document is enclosed between the `< body >` and `< / body >` tags. After this, other tags are used like `< h1 >` for the first heading or `< p >` for paragraphs, along with their corresponding closing tags.

Robert: Wow! That sounds like a lot to bear in mind. However, I know that there are some special computer programs that are used for editing HTML and that some of them are more complex and allow people to work with related technologies such as Java. So, It is easier to create and modify web pages by using professional HTML editors, isn't it?

Albert: Not exactly. Most people have told me that it is better to start with simple text editors like Notepad or TextEdit. The best way to know you are on the right track is writing down the code, saving it and then trying it out by opening the saved file in a browser.

Robert: I'll put this into practice and I'm going to make use of my new tutorials. Thank you!

Let's Practice!

First, you must understand the basics on HTML.

Instructions: Use the phrases from the box to correctly complete the sentences.

for paragraphs / the document type / <TITLE> and
</TITLE> / <body> and </body> / opening tag <html>

1. My mentor told me that one of the first things to have in mind when working with HTML is to always start with _____ declaration.
2. He also told me that the document itself begins with the _____ and it should be closed with the closing tag </html>.
3. Additionally, he told me that the body of the document is enclosed between the _____ tags.
4. He told me that the tags _____ are used to Indicate the title of the document and that they appear in a browser's bookmark file.
5. My mentor also told me that there are many other common tags which are used in HTML, like <h1> for the first heading or <p>_____.

Let's Practice!

It's good to use special programs for editing HTML.

Instructions: Circle the correct words to correctly complete the sentences.

1. It is thought that the creation and modification of web pages is much simpler by using professional HTML editors, (isn't it / is it / aren't they)?
2. Tags have elements that provide instructions regarding how information will be processed or displayed, (don't they / aren't they / isn't they)?
3. A good HTML editor offers syntax highlighting and autocompletion, (isn't there / doesn't it / don't they)?
4. Project management, integrated image viewer and tag completion are some of the features web designers look for in an HTML editor, (isn't it / doesn't it / aren't they)?
5. Some HTML editors are able to open multiple files in tabs and are expanded with plugins, (don't they / aren't they / are they)?

Extension Activity

Try your own HTML document.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for different HTML tags concepts, uses and examples.
- Open a Notepad file and create a text using as many HTML tags as possible.
- Revise your text making sure you use the tags correctly.
- Show your document to a partner and receive feedback.

Self-Assessment

Yes

No

- I understand the use and concept of different HTML tags.
- I create an HTML document.
- I use tags appropriately.

☐ ☐
☐ ☐
☐ ☐

Target Words

- **document type declaration** (noun): a tag that specifies the language on which a document is written
e.g. He told me that all documents must start with the document type declaration "
- **enclosed** (adjective): surrounded by, in between something
e.g. My mentor also told me that the document itself begins with the opening tag " and ends with the closing tag " and that the body of the document is enclosed between the " and " tags.
- **heading** (noun): a title or topic that stands at the beginning of a paragraph
e.g. After this, other tags are used like h1 (<>) for the first heading or < p > for paragraphs, along with their corresponding closing tags.
- **bear in mind** (expression): to keep in mind, to take into consideration
e.g. That sounds like a lot to bear in mind.
- **put something into practice** (expression): to apply something that was learned
e.g. I'll put this into practice and I'm going to make use of my new tutorials.
- **HTML editor** (noun): a computer program used for editing HTML
e.g. It is easier to create and modify web pages by using professional HTML editors, isn't it?

Learning Points

Tag Questions with the Verb To Be

We use **tag questions** when we want to confirm what was said previously in a statement.

When we are almost sure about an idea, we can state it and then add a **tag question** in order to let the other person know that we expect him or her to confirm that statement.

Example: *It is better to start with simple editors for learning HTML, **isn't it?***

The **tag question** verb depends on the verb we use in the statement. When the main verb of the sentence is the verb **to be**, we must also use the verb **to be** in the **tag question**.

Example: *Professional HTML editors are much harder to use, **aren't they?***

Don't forget that if the statement is *negative*, the **tag question** should go in its *affirmative form*, and if it is *affirmative* the **tag question** should be *negative*.

Examples

- *As far as I'm concerned, websites are built by using some pre-determined basic tags, **aren't they?***
- *It is easier to create and modify web pages by using professional HTML editors, **isn't it?***

Learning Points

Reported Speech in Affirmative With the Verb Tell

The **reported speech** is used to inform what someone else says or said.

We need to take into account that in the **reported speech**, the verb tenses change depending on the verb that introduces the **reported statement**. Additionally, we generally use *that* to introduce the **reported sentence**; however, this is optional, especially in spoken English.

Example: *My brother **told** me **that** he was learning how to design websites.*

For the **reported speech**, we can use different verbs to introduce the reported statement, such as **say**, **tell**, or **state**. As of now, we are going to focus on the verb **tell**. All we need to know when using the verb **tell**, is that we need to inform to whom the person was talking to.

Example: *The teacher **told** Sofia that she could start with simple editors before using the professional ones.*

Moreover, we have to take into account that the verb tenses will depend on the tense of the verb we use to introduce the **reported speech**.

Examples:

*The project manager **tells us** that it is necessary to learn how to write HTML.*

*The project manager **told us** that it was necessary to learn how to write HTML.*

Notice that if the verb we use to introduce the **reported speech** is conjugated in the *present tense*, the verb in the **reported speech** will also be conjugated in a *present tense* (this happens when we talk about general statements or facts).

However, there is generally a *shift tense* when the **reported speech** is used:

Learning Points

DIRECT SPEECH	REPORTED SPEECH
Simple present <i>He told her: "HTML is necessary for designing websites"</i>	Simple present (facts) <i>He told her that HTML is necessary for designing websites.</i>
Simple present <i>The manager told us: "You have to build that website with some pre-determined basic tags"</i>	Simple past <i>The manager told us that we had to build that website with some pre-determined basic tags"</i>
Present continuous <i>She told me: "You're making good progress with that website construction"</i>	Past continuous <i>She told me that I was making good progress with that website construction.</i>
Simple Past <i>He told her: "I finished that website design last night".</i>	Past Perfect <i>He told her that he had finished that website design the night before.</i>
Past Continuous <i>The project director told us: "You were doing better things before"</i>	Past Perfect Continuous <i>The project director told us that we had been doing better things before.</i>
Present Perfect <i>I told her: "I've learned a lot about HTML in the last few days".</i>	Past perfect <i>I told her that I had learned a lot about HTML in the previous few days.</i>
Past Perfect <i>She told the manager: "I had built this website before."</i>	Past Perfect <i>She told the manager that she had built that website before.</i>

Examples

- *He told me that all documents must start with the document type declaration < !DOCTYPE html >.*
- *My mentor also told me that the document itself begins with the opening tag < html > and ends with the closing tag < / html >, and that the body of the document is enclosed between the < body > and < / body > tags.*
- *Most people have told me that it is better to start with simple text editors like Notepad or TextEdit.*
