Let's Start!

Everything is easier with CSS.

Learning Outcome:

Understand information about common solutions to problems in spoken or written documents.
Describe concepts, principles, and important characteristics of hypertext preprocessor in spoken or written documents.

Can Do Statements:

- I can read about CSS.
- I can write a meaningful text to give detailed information about CSS.
- I can explain briefly how CSS works

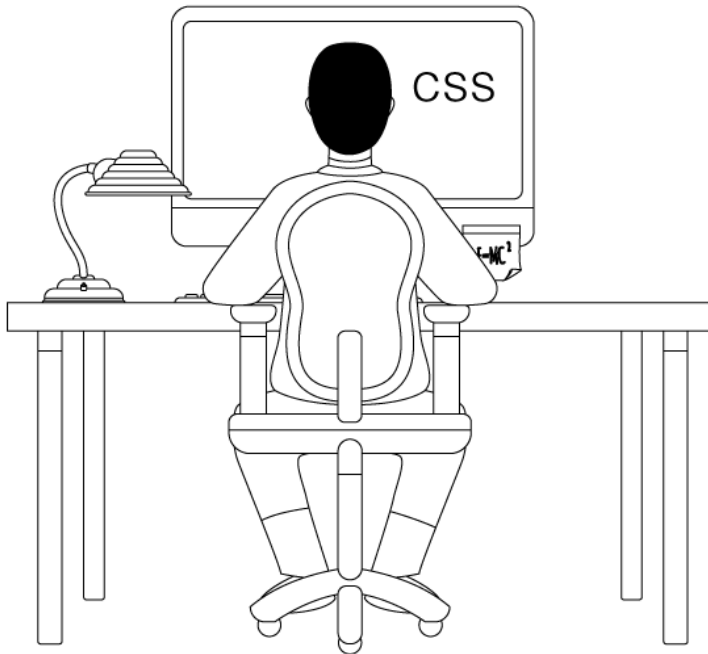

Ask your partner:

- Does an HTML code work in any browser? Why?
- What can you do to use a HTML code in different browsers?

Let's Explore!

The teacher is helping Edward to understand CSS.

Instructions: Read the text below.

Edward: I don't understand why CSS was created in the first place.

Teacher: HTML was originally created to label web page content, but it was never designed to contain tags for formatting a website. That means tags like `< font >` had to be added to every single page when creating a large website. To tackle this issue, CSS was created. It has several benefits such as separation of the document content and its presentation. We'll be looking at some other benefits that will save us time and money. After these questions and answers, you won't be wasting your time creating a website the way you used to.

Edward: Ok, that helped me a lot, but what does CSS stand for?

**Let's Practice!****Multiple Benefits of Working With CSS**

Instructions: Match column A with column B.

COLUMN A

1. Will you be setting the
2. Will it be showing how the HTML
3. Your website won't be having any reading issues
4. Your website's content won't be looking the way
5. The engineer won't be changing the graphic design of that document

COLUMN B

- a. without editing a few lines in the corresponding CSS file.
- b. thanks to the CSS hacks.
- c. elements are presented in that website?
- d. you want unless you include CSS coding.
- e. style of your website with CSS?

**Let's Practice!**

People ask a lot of questions about CSS.

Instructions: Organize the mystery sentence. Read the sentences aloud. Check your pronunciation with your instructor.

1. the / of / to / manager / presentation / is / document. / used / describe / The / CSS / a / said
2. be / can / programmer / to / if / interface / asked / applied / any / the / CCS / HTML. / from / different / I
3. creation / is / cornerstone / a / told / for / me / websites. / The / CSS / the / of / instructor
4. document / the / if / of / from / asked / CSS / presentation. / enables / She / its / separation / content / us
5. asking / language / allows / me / if / users / were / CSS / the / The / same / markup / style.

Extension Activity

The importance of CSS

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for further information about CSS and how it works.
- Write a short text about the benefits of using CSS
- Create a CSS tutorial based on your text.
- Share with your partners.

Self-Assessment

Yes

No

- I talk about CSS
- I explain the benefits CSS can bring me.
- I write texts about CSS, and check my spelling and pronunciation.
- I discuss CSS benefits with my partners.

Target Words

- **tag** (noun): a consecution of characters in a markup language used to provide information
e.g. HTML was originally created to label web page content, but it was never designed to contain tags for formatting a website
- **tackle** (verb): to solve a problem, to handle a situation
e.g. To tackle this issue, CSS has been created.
- **Style sheet** (noun): a type of file that has font and layout to give a standardized look to a document
e.g. CSS stands for Cascading Style Sheets.
- **font** (noun): a combination of size, color and type of letter
e.g. It sets the styles in a website, which includes the color, font and layout in a different fi
- **Listen CSS hack** (noun): coding technique used to conceal or display information
e.g. However, there are some CSS hacks that work as a clean coding technique, thus the search engine won't have difficulties reading your website content.
- **viewing format** (noun): preset layout for data display
e.g. In addition, it makes your website available in different viewing formats

Learning Points

Future Perfect in Negative and Questions

We use the **future perfect** to talk about a future action that will finish before or around a certain time in the future.

The **future tense** is also used to talk about events that will last for a specified period of time at a determined moment in the future. Additionally, this tense is also used to express certainty regarding how completed an action is.

When we use the **future perfect in negative** we need to add **not** to **will**:

Subject + Will **not** (or won't) + Have+ Past participle

Example: *By this time tomorrow, we **won't have finished** designing the website with CSS.*

To form questions with this tense, add will before the subject:

Will+ Subject+ have+ past participle + ?

Example: ***Will** you **have set** the styles for this web page by Monday?*

Examples

- *This ensures that, by the time the website has been fully designed, pages won't have had different style throughout the site*
- *Will programming have completely changed to CSS by the end of this decade?*

Learning Points

Future Continuous in Negative and Questions

We use **the future continuous** to talk about an action that will be in progress at or around a time in the future.

We use the **future continuous** to predict a future action that will be in progress at or around some determined time in the future. This tense is also used to make guesses about the future.

If we want to use the **future continuous in its negative** form, we add **not** to **will**:

Subject + Will **not** (won't) + be + verb-ing

Example: You **won't be using** CSS for that website.

To make a **question** using this tense, we place **will** before the subject:

Will + Subject + Verb to be + Verb-ing + ?

Example: **Will** the designer **be setting** the website layout only with CSS?

Examples

- *After these questions and answers, you won't be wasting your time creating a website the way you used to.*
- *If I need to create a website, will I be using CSS?*
- *This will ensure that when you've finished your website, visitors won't be looking at any other websites but yours.*
